

Collaborative pharmaceutical care in research and practice

8th PCNE Working Conference

Workshop 4: Quality standards for PhC research

Facilitators: Olivier Bugnon and Marie Paule Schneider (Switzerland) and Martin Henman (Ireland)

Programme outline:

The implementation of quality management systems should be a MUST for continuously improving the performance of research in Pharmaceutical care; it would facilitate its financing and marketing and increase the satisfaction and the personal skills of the research team. Researching in collaborative care and developing multicentre studies requires a highly structured process, incorporating risk management and monitoring. Through the consideration of case histories, the workshop (for experienced researchers) aims to define Good (Pharmaceutical Care) Research Practice Standards with identification and resolution of potential barriers related to national academic environments and/or related to issues of interprofessional collaboration.
